PAIRED ROW — DUAL CTA

Cancel

Confirm

Anatomy

- **Base:** 16px radius, 4px `--cat-secondary-text` border, 14×22px padding, Fredoka semibold 18px, text color always `--cat-header`.
- **Press:** `opacity: 0.7` + 1px nudge. No scale. No color flash. Haptic `light` fires in-app.
- **Stamped:** optional `box-shadow: 0 4px 0 0 --cat-header` on primary CTAs — gives a lifted sticker look that “pushes in” on press. Reserve for reward / claim moments.
- **Icon:** 22×22 PNG from `assets/icons/`, leading edge, 10px gap. Never stroke SVG. Never emoji.
- **Width:** 100% inside a card/container, `max-width: 420px` when free-standing.

Hierarchy & rules

- **Primary** (|apricot) — the one committing action per screen. “Start cooking”, “Claim”, “Confirm”. Exactly one on screen.
- **Secondary** (|sage) — concurrent verbs: Pause, Save, Okay. Same border weight as primary, different fill.
- **Tertiary** (|cream + dark border, 3px) — navigation / “take me somewhere else”. Lower weight border signals lower weight action.
- **Ghost** (|) — reversible / escape actions: Cancel, Give up, Skip. Never on illustrated backgrounds — the 2px border disappears.
- **Destructive:** blush fill, rose text + border. Still soft — this app never shouts red at you.
- **Never:** text-only links as buttons, icon-only circles for primary actions, flat no-border buttons, hover gradients.

CATENA	COMPONENTS · SHOP CARDS	22
--------	-------------------------------	----

Headers

Anatomy

- **Bar:** full-width, no rounded corners, flush against the screen edges. Fill is always the solid `--cat-secondary-text` brown — never translucent. Even over illustrated backgrounds, keep the bar opaque so it reads as a real edge, not a wash.
- **Top padding:** `44px` (iOS status-bar safe area). Bottom padding: `16px`.
- **Circular button:** 40px circle in `--cat-inactive` (warm gray) with a cream glyph, pinned left at `16px`. Subtle shadow — it's a control, not the title.
- **Title chip:** solid pill in `--cat-secondary-text` with cream label, 20px Fredoka semibold, `10px 28px` padding, fully rounded. Centered in the bar.
- **Tabbed extension:** when tabs are needed, they hang directly off the bottom of the bar on the same solid brown fill — no seam, no curve, no background change.

Rules

- One title chip per screen. Never two. The chip is the title — do not add a subtitle under it.
- Circle glyph follows the nav context: `×` for modals and subpages, `←` for deep nav. Never a home / menu button — Home doesn't use this header.
- The bar is *always* solid brown. Translucency is for pop-ups, cards, and scrims — not for this header. It needs to feel like a printed band.
- Never round the bottom corners of the bar. Never add a cream curve. The bar is a hard brown band across the top.
- Never place level / coin / streak chips inside this bar. Those live on the Home screen, which has its own layout.

MODAL — SCRIM + CREAM CARD

BOTTOM SHEET — DESTRUCTIVE CONFIRM

Keep going

Give up

TOAST, BANNER, COACHMARK

Couldn't save — check your connection and try again.

Tap the mailbox to read letters from your cats.

Meow! Recipe saved.

Scrim

- **Default scrim:** `rgba(0, 0, 0, 0.5)`. No blur filter — the opacity alone gives the soft fall-off.
- **Soft scrim:** `rgba(86, 61, 41, 0.35)` for bottom-sheets + non-modal overlays that shouldn't fully obscure context.

Modal

- Centered card, max `300px` wide, cream fill, `3px --cat-header` border, `20px` radius, `1g` shadow.
- Optional circular glyph on top (72px circle in sage or tan) for emotional framing — a cup, a cat silhouette, a coin. Never a raw emoji on cream.
- Two actions max: primary + ghost OR primary + danger. Both full-width-split, never text links.
- Title uses Julianne display (22px); body is Fredoka 14px `--cat-secondary-text`.
- Dismiss: the small circle × at top-right, or tapping the scrim. Never require going through a button.

Bottom sheet

- Attaches to the bottom edge, 22px top-radius, 3px brown border (top + sides only). 40×4 handle centered above the title.
- Actions paired full-width. Destructive confirms put danger on the right (primary position) so it sits where the eye expects the commit action.
- Swipe-down-to-dismiss in-app. On web, tap the soft scrim.

Toasts

- **Meow toast** (bottom-center pill): brown fill, cream label, orange/sage/error circular glyph on left. Auto-dismisses after ~1.8s. Use for tiny acknowledgements ("bought", "saved", "locked item").
- **Banner toast** (top, below header): blush fill, error border. Use only for *recoverable* errors — network hiccups, save failures. Dismissible.
- Never stack toasts. A new toast replaces the old (debounced).

Coachmark

- Brown pill tooltip + a pulsing orange target dot. Used once per feature, first-run only.
- No ALL-CAPS celebration overlays — Catena's voice is gentle. Wins arrive as envelopes (see Popups), not as dramatic black-out screens.

COMPONENTS

Letter-in-envelope

CATENA / POPUPS

Letter-in-envelope

Every Catena popup is a **letter card** sliding up out of an **open envelope**. The letter carries the content; the envelope (two side flaps meeting in a V, plus a bottom flap with the paw seal at its tip) frames it from below.

Anatomy

- **Letter card** — rounded rectangle, cream background. Title + content live here. Extends above the envelope top edge by ~80–100px.
- **Envelope back** — flat rectangle with rounded bottom. Yellow/sage/cream/tan per variant.
- **Side flaps** — left + right triangles whose diagonals meet at center, forming a V. Sit on top of the letter, cropping its bottom half.
- **Bottom flap** — large triangle folded up, tip at the V apex. Covers the very bottom of the letter.
- **Paw seal** — 58px roundel at the flap tip, centered over the V.
- Tap outside to dismiss. No close-X.

Color meaning

- **Yellow** — everyday wins: claimed, daily reward
- **Sage** — community / returning: welcome back
- **Cream** — quiet / narrative: letters from cats, likeability
- **Tan** — milestones: level up, streaks, rare unlocks

Thank you for the chowder. It was purrfect. I napped on the sill for three hours after.

— Cali

RULES

Composition + copy

One shape, many letters

- The envelope never appears without a letter inside. Empty envelopes are not a pattern in Catena.
- Letter card extends ~80–100px above the envelope top edge. Keep the title inside this exposed region.
- The V where the side flaps meet is the **visual midline** — split content above/below it deliberately (title above, prizes below).
- Paw seal is always at the flap tip, centered on the V apex.

Type voice

- **Julienne display** for titles: *"Claimed!", "Welcome back!", "Dear friend,"* 24–38px.
- **Fredoka** for body + subtitle + prize labels.
- Warm conversational capitalization: *"Welcome back!"* not *"WELCOME BACK"*.

What this system is not for

- **Lists** (mailbox, leaderboard, friends) — those live as full screens or bottom sheets, not letters.
- **Dialogs / confirmations** — use a standard modal.
- **Persistent toasts or banners** — use the toast pattern.
- Letters are for **moments**: a reward, a milestone, a note from a cat. One feeling per envelope.

SUGGESTION — INSIGHT (NEUTRAL)

◆ FROM YOUR PATTERNS

You do your best work on Wednesday afternoons.

Your last four Wednesdays averaged 3h of focus — nearly double your weekday baseline. Want to plan around that rhythm?

Schedule a Wed block

Dismiss

SUGGESTION — MENTAL HEALTH (GENTLE)

♥ CHECK-IN

You've been grinding late this week.

Three sessions past 11pm and your pause time is climbing. A short rest tomorrow might help more than another session tonight.

Set a bedtime cutoff

Not now

SUGGESTION — SCREENTIME (AI-DRAFTED)

◆ SCREENTIME

AI DRAFT

45m on social before your 6pm session.

That's roughly how long your average focus block lasts. A 15-minute buffer before starting might help you settle in — want to try a 10-minute *Pre-focus* mode?

Try pre-focus

Turn off suggestions

Chart palette

- Primary data color: `--cat-accent-orange`. Current period, highlighted bar, line stroke, top-ranked item.

- **Secondary / baseline:** `--cat-surface-sage`. Peer bars, "last period" comparisons, neutral rails.
- **Categorical:** the 15-color tag palette (`--cat-tag-1` ... `--cat-tag-15`). Only place blues/purples are allowed. Reuse the user's own tag color when the chart is about their tags.
- **Empty / scale base:** `--cat-surface-tan` — heatmap blanks, unfilled portions of tracks, rings, and split bars.
- **Heatmap ramp:** tan → orange at 30/55/80% → full orange. 5 steps. Always paired with a *Less → More* legend.

Suggestions system — rules

- **Three surfaces, three tones:** `.insight` (cream, neutral pattern-finding), `.mental` (blush, soft wellness check-ins), `.screen` (sage, screentime / app-usage nudges). Color = category — stay consistent so the user can pre-read intent.
- **Voice:** observations, never judgments. "You've been grinding late" — not "You're overworking." Offer a next step, always dismissible.
- **AI-drafted content** carries a small `AI · draft` stamp in the top-right so users can tell human-authored insights from model-authored ones.
- **Frequency:** max one suggestion per Insights visit, max one mental-health card per 7 days. Never stack.
- **No diagnoses.** Never "you're burned out", never "you might be depressed". Wellness suggestions describe behavior, then offer a gentle action (cutoff, break, pre-focus).
- **Privacy-sensitive data** (screentime, location, biometrics) always shows a one-line source note: "Requires OS permission · syncs from ...".

Chart rules

- **Typography:** all axis labels are Fredoka 500 at 10–11px. Values use `tabular-nums`. Titles sit above the chart.
- **Grid:** dashed 3 3 horizontal lines in `--cat-border` at 80% opacity. No vertical gridlines, no tick marks, no chart borders.
- **Stacked area:** use for "cumulative, split by subject." Paint from bottom up; total line overlays the top layer in `--cat-accent-orange`. One solid color per tag — no stripes, no patterns.
- **Heatmap:** row labels (Morning, Midday...) are 72px wide minimum — never truncate. Legend is mandatory (Less → More, 5 swatches).
- **Scatter:** dots are 5px, 1.5px brown outline, colored by tag (never by mood). Trend line is dashed orange so it reads as "our estimate," not data.
- **Never:** 3D charts, donut slices with different radii, bar shadows, radial gradients, emoji inside charts.

Recipe / food tiles — anti-patterns

- **Never use emoji in chart tiles.** Emoji break the illustrated-PNG aesthetic and don't align visually with Catena's own artwork.
- **Never use a circular tan disk as a food thumb.** The round tan roundel is reserved for people/cat avatars. Food lives on `16px-radius` cream-yellow squares with a 2px brown border — matching the in-app Shop tile.

- **Missing art:** show a diagonal-hatched placeholder with a centered tan disk. Always labeled in the copy as "no art yet" so designers don't mistake it for the final look.
- Top-ranked row gets a soft orange tint
`rgba(238,169,101,0.15)` + orange border. Rank number is the accent color, not the background.

Focus-quality cards

- **Score ring:** 0–100 composite, orange arc on a tan rail, 12px stroke, rounded caps. Factor bars on the right decompose the score (4 factors max).
- **Deep-focus streak dots:** 10-day strip of rounded squares. Filled = hit, tan = miss. Today gets a 2px brown outline.
- Interruptions are phrased neutrally. *"Avg deep stretch"* not *"Time until distraction"* — framing is friendly, not accusatory.

Screentime insights

- **App bars:** app icon is a 36px colored square with 2-letter monogram (real OS icons would live here in production). Bar color matches the icon, using the `--cat-tag-*` palette.
- **Sparkline (pickups):** 50px tall, orange stroke with translucent fill, last-point dot emphasized. Pair with a stat-pair above for the numeric summary.
- **Focus vs. phone bar:** stacked 4-week bars. Tan = off-focus phone use, orange = focus. Never show as a race — Catena frames this as *"you traded screentime for focus"*, not *"you beat your phone."*
- **Permission note:** every screentime card shows a one-line source disclosure. Non-negotiable.

Mood / mental-health system

- **5-face scale** — Rough / Off / OK / Good / Great. Custom hand-drawn SVG faces, 2.5px stroke, no color (mood is expressed through *shape*, not red/green which would feel judgmental).
- **Picked state** = filled with `--cat-accent-orange` + stamped 2px shadow. Only one face can be picked.
- **Distribution variant** shows a `count-chip` (brown pill) at the bottom-right of each face — same shape, different data role. The tallest-count face stays "picked" to read the mode at a glance.
- **Mood-by-subject:** row carries a 28px face (shape = average mood) + tag-colored subject chip. Never use mood faces as subject icons — they signify mood only.
- **Scatter (mood × length):** dots colored by subject tag. Short blurb below (*" +0.6 mood per 30 min"*) — one sentence max, phrased as observation, never prescription.
- **Voice rules:** never "you feel ____"; always "your sessions averaged ____." Never diagnose. Never stack mood prompts within the same session.
- **Privacy:** mood answers are on-device by default. Every mood-entry UI carries the dashed cream privacy note.

Streak & return

STREAK CARD — CURRENT & BEST + THIS WEEK

COMPACT STREAK CHIP — INLINE/HEADER USE

STREAK BROKEN — GENTLE RESET STATE

Anatomy

- **Streak card:** `--cat-surface-yellow` surface, 2px `--cat-header` border, 16px radius. The *current* tile is highlighted with an orange border + warmer fill (`#fff4e6`); the *longest* tile stays neutral so the comparison reads at a glance.
- **Week-dots:** 7 circles, one per calendar day, left = Monday. Completed = sage fill with a checkmark, today = orange outline + soft halo, future = muted outline only. **No flame emoji. Ever.** A streak here is a gentle ritual, not a loss-aversion leash.
- **Compact chip:** pill version for dense placements (home header, session summary). 8px mini-dots row + count. Same color logic as the full dots.
- **Reset state:** when the streak drops to 1, the card keeps its warm cream surface but swaps the border to `--cat-accent-orange` and the header color to match — so a fresh start *reads* as encouragement, not as a loss. Message sits on one line; never use an em-dash.

Rules

- Streak counts *study sessions completed*, not app opens. One full session → today is `done`.

- Streak copy stays gentle. When a streak breaks, lead with “*A fresh start.*” Never “You lost your 7-day streak.” This is not Duolingo.
- Never stack streaks with other return surfaces on the same screen. Home shows the compact chip; the full card lives inside Insights.
- The week always starts on Monday, matching the rest of the product’s weekly framing.

Not in this card: welcome-back banner, daily bonus, and mailbox nudge have all moved to the **Popups / Letter system** card — returning rewards are delivered as letters from the cats (envelope motif), not as generic banners. This card covers streaks only.

Decorate / place

CATENA / DECORATE CONTROLS

Slot-based placement

Catena's café has **fixed slots** — pre-defined spots on the floor, sill, and shelves. Players don't drag to arbitrary positions; they pick a slot and fill it from inventory. Every item either lives in a slot or sits in the drawer. That's the whole model.

Floor · 2x1

Floor · 1x1

Remove

Slots — the whole model

- **Fixed positions.** The café has a pre-authored set of slots at launch. Users never create, move, or delete slots — they only fill them.
- **Each slot is typed** (`sill 1x1` , `shelf 1x1` , `floor 1x1` , `floor 2x1`). Items carry matching slot-type tags and only appear in the inventory filter for compatible slots.
- **A slot holds at most one item.** Stacking is not allowed in v1. Larger furniture occupies a larger slot (2x1, 2x2) that was defined that way up front.

Slot states

- **Empty** Dashed orange outline, translucent yellow fill, center "+" glyph. Appears only in decorate mode.
- **Filled** Solid brown outline, item asset centered with a stamped 3px bottom shadow. Taggable in decorate mode.
- **Selected** Orange border + 4px soft orange halo + `-2px` lift. Slot-tag flips to orange. Only one slot can be selected at a time.
- **Idle (not decorate mode):** the slot outline and tag disappear completely — only the asset shows.

Interaction rules — no dragging

- **Tap an empty slot** → slot becomes selected, inventory drawer filters to compatible items with a "Fits this slot" label. Tap a tile → item drops in. Drawer re-filters if the slot is still selected and has room.
- **Tap a filled slot** → slot becomes selected, a slot-sheet floats above the drawer with the item's name, location, and two actions: *Swap* (opens filtered drawer) or *Remove* (returns to inventory).
- **Tap the same slot again** → deselects. Tapping empty café space outside any slot also deselects.
- **Drag gestures are ignored.** Even long-press is reserved for future preview, not movement. This keeps layouts stable and avoids accidental rearrangement during focus breaks.

- **Undo** reverses the last slot change (place / swap / remove). **Save** (top-right primary) commits the layout and exits decorate mode.

Inventory drawer — two jobs

- **No slot selected:** drawer title is "Inventory", shows everything you own. Tiles are informational — you can't drop from here to "anywhere."
- **Slot selected:** drawer title becomes "Fits this *sill* · 1×1 " (etc.). Incompatible items are dimmed to 50%, not removed, so players can see what they own but learn the compat rules.
- Qty badge (brown pill, top-right) is absolute count owned. A tile with qty 0 is hidden from the drawer entirely.

Why slots, not free drag

- **Authored composition.** Slots keep the café looking intentionally designed no matter who's decorating — no "items floating in the wrong half of the frame."
- **Mobile-friendly.** Taps only. No pinch-scale, rotate, or fine-grained drag on a 4" phone.
- **Cheaper state.** Layout = `{slotId: itemId}`. Easy to sync, diff, and preview without pixel math.
- **Supports visiting friends' cafés.** Your slot set maps cleanly onto theirs — no "their 3rd chair overlaps my bookshelf" clashes.
- All asset thumbs here use emoji placeholders — production uses illustrated PNGs from Firestore. Don't ship emoji.

06

PART 6

Session screens

The torn-paper receipt that closes every focus session.

1 ENTRY

SESSION SCREENS

Session receipt

CATENA / SESSION SCREENS

Session complete receipt

When a cook finishes, the café prints a **receipt**. Hand-torn paper, the dish you cooked at the top, an itemized breakdown of what you earned (and what got docked for pauses / distraction), and a **journal strip** at the bottom where you note how the session felt. One artifact — celebration, honesty, and a keepsake.

01 — SESSION COMPLETE

Full receipt

The standard post-session screen. Receipt sits over a blurred café. User taps a mood face, optionally writes a note, then "Okay" returns to home.

Skip note

Okay

02 — GAVE UP EARLY

Partial receipt

Same receipt, but the recipe line reads "not served" and the dish rondel is empty. Rewards + journal still apply — catena doesn't shame partial sessions.

a fresh start later

03 — JOURNAL STRIP

Reflection component

The journal is the mental-health seam of the receipt. A mood face + an **auto-written** sentence + an **optional** handwritten note. It lives on the receipt, but the same component also appears alone in *Insights* → *History*.

How'd this one feel?

rough great

Five mood faces in a row. The third face (neutral) is highlighted with an orange background.

Spent **52 min** on **Biology — chapter 6**.

A line to yourself (optional) · tap to write

RULES

Anatomy + voice

Paper

- Cream stock `#fdf7e8` with soft fiber noise. 22px side padding, 36/32 top/bottom (to clear the torn edges).
- **Torn edges** via `clip-path` zig-zag, 8–10px deep, irregular. Never straight — the receipt is hand-torn, not machine-cut.
- Full receipt rotates `-1.5° / +1.2°` alternating by session. Rotation anchors on the center. Shared drop-shadow `0 14px 22px rgba(86,61,41,0.24)`.
- Paw watermark at 12% opacity, bottom-right, rotated 16°.

Row system

- **earn** green `#4a7c2a`, prefix `+`. For minutes, recipes, bonuses, streaks.
- **penalty** red `--cat-error`, prefix `-`. Indented row, lowercase, no "x" mark. For pauses, app-switches, deep-focus breaks.
- Dots fill the middle using `·` glyph at 35% opacity — receipt leaders. Never straight lines.
- **TOTAL** row: 2px brown rule above, Julienne 22px on both sides, coin glyph preceding the number.
- Never show a row with value 0. If nothing earned there, omit.

Hero dish

- 110px blush rondel () with a 78% yellow "plate" tilted 8° and the illustrated dish at 48px rotated -8°. Reads as "plated on a napkin."
- When the session was abandoned, swap rondel to tan, plate becomes dashed outline, dish is 35% opacity.
- Dish copy is Julienne 22px, centered. Never put the dish inside a box or with a shadow — it floats on the receipt.

Journal strip

- **Mood faces** are 36px circles, 5 total, scale rough → great. Selected = orange fill + 3px halo. One per session, overwrite allowed until the next session starts.
- **Auto-line** (always visible): "*Spent 52 min on Biology — chapter 6*". Subject + minutes highlighted orange. Written for the user by the app — no typing needed.
- **Note** (optional): lined paper field, italic Fredoka 12.5px. Placeholder is a soft brown at 38%. Max ~120 chars — this is a tiny note-to-self, not a diary.
- Tape pieces are rotated rectangles at ~55% opacity — texture only, no semantic meaning.
- **Privacy:** mood + note are on-device unless the user opts into cross-device sync. The journal never feeds the leaderboard or friend feeds.

Voice

- Celebrate, but don't congratulate. "*Thanks for cooking.*" Not "*AMAZING!*".
- For gave-up sessions: "*Thanks for sitting.*" + "*A fresh start later.*" No shame copy. Never show the red penalty rows larger than earn rows.
- Auto-line is fact-based. **Never interpret** — no "you did great!" The user's mood face + optional note does the feeling work.
- Actions:  (small icon, leftmost),  (ghost),  (sage primary). Never label the primary "Claim" — the coins were already accounted for during the session.

When to use which screen

- **Full receipt** — completed cook, the default. Runs every finished session.
- **Partial receipt** — user hit "Give up" *and* studied ≥ 5 min. Under 5 min → no receipt, just a soft "come back when you're ready" toast.
- **Journal strip standalone** — reused in Insights → History when users look back at a prior session. Same component, no receipt chrome.
- The **claim envelope** (see Popups) is for *unexpected* rewards — daily login, level ups, cat

likeability. Session earnings go on the receipt,
never in an envelope.
